# 1 Mandatory

<b>Module name</b> Advanced Digital Integrated Circuit Design					
<b>Module Nr.</b> 18-ho-2010	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Klaus Hofmann		
<b>1</b>	<b>Content</b> MOS Transistor Models, CMOS Logic Gates, Chip Layout and Design Rules, Static and Dynamic Behavior of CMOS Circuits, Synchronous CMOS Circuits, Performance and Power Characterisation, Design Techniques and CAD Tools, FPGA and Gate Array Technologies, Memory Technologies, Chip Test.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> A student is, after successful completion of this module, able to <ul style="list-style-type: none"> <li>• understand the short-channel effects of modern CMOS transistors,</li> <li>• derive and analyse the most important circuit concepts for digital logic gates,</li> <li>• understand the design flow of digital ASICs based on standard cells (design, layout, simulation/verification),</li> <li>• knows the pros and cons of synchronous vs. asynchronous logic, multiclockphase systems,</li> <li>• understands the differential design methods of integrated circuits (ASIC, ASIP, Full-custom/Semicustom, PLA, PLD, FPGA),</li> <li>• understands basic circuitry of logic and arithmetic units (adders, multipliers, PLL/DLL),</li> <li>• knows the design principles and properties of integrated semiconductor memory (DRAM, SRAM, Flash, MRAM, FeRAM)</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Lecture "Electronics"				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written Examination, duration: 90 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc Wi-ETiT, MSc iCE, MSc iST, MSc MEC, MSc EPE				
<b>7</b>	<b>References</b> Lecture Slide Copies; John P. Uyemura: Fundamentals of MOS Digital Integrated Circuits; Neil Weste et al.: Principles of CMOS VLSI Design				
<b>Courses</b>					
	<b>Course Nr.</b> 18-ho-2010-vl	<b>Course name</b> Advanced Digital Integrated Circuit Design			
	<b>Instructor</b> Prof. Dr.-Ing. Klaus Hofmann			<b>Type</b> Lecture	<b>SWS</b> 3

	<b>Course Nr.</b> 18-ho-2010-ue	<b>Course name</b> Advanced Digital Integrated Circuit Design		
	<b>Instructor</b> Prof. Dr.-Ing. Klaus Hofmann	<b>Type</b> Practice	<b>SWS</b> 1	

<b>Module name</b> Digital Signal Processing					
<b>Module Nr.</b> 18-zo-2060	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Abdelhak Zoubir		
<b>1</b>	<b>Content</b> 1) Discrete-Time Signals and Linear Systems – Sampling and Reconstruction of Analog Signals 2) Digital Filter Design – Filter Design Principles; Linear Phase Filters; Finite Impulse Response Filters; Infinite Impulse Response Filters; Implementations 3) Digital Spectral Analysis - Random Signals; Nonparametric Methods for Spectrum Estimation; Parametric Spectrum Estimation; Applications; 4) Kalman Filter				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand basic concepts of signal processing and analysis in time and frequency of deterministic and stochastic signals. They will have first experience with the standard software tool MATLAB.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Deterministic signals and systems theory				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Written Examination, duration: 180 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Written Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> BSc ETiT, Wi-ETiT				
<b>7</b>	<b>References</b> Course manuscript Additional References: <ul style="list-style-type: none"> <li>A. Oppenheim, W. Schafer: Discrete-time Signal Processing, 2nd ed.</li> <li>J.F. Böhme: Stochastische Signale, Teubner Studienbücher, 1998</li> </ul>				
<b>Courses</b>					
	<b>Course Nr.</b> 18-zo-2060-vl	<b>Course name</b> Digital Signal Processing			
	<b>Instructor</b> Prof. Dr.-Ing. Abdelhak Zoubir			<b>Type</b> Lecture	<b>SWS</b> 3
	<b>Course Nr.</b> 18-zo-2060-ue	<b>Course name</b> Digital Signal Processing			
	<b>Instructor</b> Prof. Dr.-Ing. Abdelhak Zoubir			<b>Type</b> Practice	<b>SWS</b> 1

<b>Module name</b> Technical Electrodynamics for iCE					
<b>Module Nr.</b> 18-dg-2150	<b>Credit Points</b> 5 CP	<b>Workload</b> 150 h	<b>Self study</b> 90 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Herbert De Gersem		
<b>1</b>	<b>Content</b> 1) Fundamentals of electromagnetic field theory – Maxwell's equations in differential and integral form; Electromagnetic waves: propagation in free space, polarization, reflection/refraction. 2) Numerical solution of electromagnetic field problems – Space discretization with surface and volume meshes; Main numerical algorithms for discrete local approximation of Maxwell's equations; Finite Integration Technique; Time and frequency domain solution methods; Stability, convergence. 3) Practical aspects of electromagnetic simulation – Introduction to accuracy issues; Preprocessing: 3D geometry, computational domain, boundary conditions, electromagnetic field sources; Time vs frequency domain; Postprocessing; Network parameter extraction. 4) Application to typical high-frequency devices: Waveguide / resonator structures, planar structures				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand fundamental principles of wave propagation, guided waves and antennas. They will be able to model microwave components with simulation software tools. They will have experience with state of the art software tools for electromagnetic fields.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Fundamentals of electrodynamics (Grundlagen der Elektrodynamik)				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Written Examination, duration: 180 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Written Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc iCE				
<b>7</b>	<b>References</b> Course manuscript Additional References: <ul style="list-style-type: none"> <li>D.K. Cheng: Field and Wave Electromagnetics. Addison-Wesley, New York, 1992</li> <li>C.A. <b>Module name</b> Communication Technology II					
<b>Module Nr.</b> 18-kl-2010	<b>Credit Points</b> 4 CP	<b>Workload</b> 120 h	<b>Self study</b> 75 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Anja Klein		
<b>1</b>	<b>Content</b> linear and nonlinear digital modulation schemes, optimum receivers for AWGN channels, error probability, channel capacity, channel models, channel estimation and data detection for multipath channels, multicarrier schemes, OFDM				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After completion of the lecture, students possess: <ul style="list-style-type: none"> <li>• the ability of comparing, evaluating, classifying and analyzing linear and nonlinear modulation schemes by means of signal space representations;</li> <li>• the ability to understand, describe and analyze the influence of AWGN on the signal;</li> <li>• the ability to understand and derive optimum receivers in case of AWGN channels;</li> <li>• the ability to understand, describe and analyze the influence of multipath propagation on the signal;</li> <li>• the ability to describe the influence of a multipath channel mathematically (channel model) and estimate the multipath channel at the receiver;</li> <li>• the knowledge of equalizing the received signal in order to undo the influence of multipath propagation, as well as the ability to derive and design several equalizer structures;</li> <li>• the ability to analyze and evaluate the properties and application areas of multicarrier transmission systems, e.g. OFDM-systems;</li> <li>• the ability to design and evaluate the system parameters of multicarrier schemes for the application in realistic mobile radio scenarios;</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Electrical Engineering I and II, Deterministische Signale und Systeme, Stochastische Signale und Systeme, Communication Technology I, Basics of Telecommunication, Mathematics I to IV				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written Examination, duration: 90 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETIT, MSc Wi-ETiT, MSc CE, MSc iCE, MSc iST, MSc MEC				
<b>7</b>	<b>References</b> will be announced in the lecture

<b>Module name</b> Communication Networks II					
<b>Module Nr.</b>	<b>Credit Points</b>	<b>Workload</b>	<b>Self study</b>	<b>Duration</b>	<b>Cycle offered</b>
18-sm-2010	6 CP	180 h	120 h	1	WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Ralf Steinmetz		
<b>1</b>	<p><b>Content</b></p> <p>The course Communication Networks II covers the principles and practice of computer networking and telecommunications with emphasis on the Internet. Starting with the history, the course discusses past, current and future aspects of communication networks. In addition to the basics including well known protocols and technologies, recent developments in the area of multimedia communication (e.g., Video Streaming, P2P, IP-Telephony, Cloud Computing and Service-oriented Architectures) will be examined thoroughly. The course is designed as follow-up to Communication Networks I.</p> <p>Topics are:</p> <ul style="list-style-type: none"> <li>• Basics and History of Communication Networks (Telegraphy vs. Telephony, Reference Models, ...)</li> <li>• Transport Layer (Addressing, Flow Control, Connection Management, Error Detection, Congestion Control, ...)</li> <li>• Transport Protocols (TCP, SCTP)</li> <li>• Interactive Protocols (Telnet, SSH, FTP, ...)</li> <li>• Electronic Mail (SMTP, POP3, IMAP, MIME, ...)</li> <li>• World Wide Web (HTML, URL, HTTP, DNS, ...)</li> <li>• Distributed Programming (RPC, Web Services, Event-based Communication)</li> <li>• SOA (WSDL, SOAP, REST, UDDI, ...)</li> <li>• Cloud Computing (SaaS, PaaS, IaaS, Virtualization, ...)</li> <li>• Overlay Networks (Unstructured P2P, DHT Systems, Application Layer Multicast, ...)</li> <li>• Video Streaming (HTTP Streaming, Flash Streaming, RTP/RTSP, P2P Streaming, ...)</li> <li>• VoIP and Instant Messaging (SIP, H.323)</li> </ul>				
<b>2</b>	<p><b>Learning objectives / Learning Outcomes</b></p> <p>The course Communication Networks II covers the principles and practice of computer networking and telecommunications with emphasis on the Internet. Starting with the history, the course discusses past, current and future aspects of communication networks. In addition to the basics including well known protocols and technologies, recent developments in the area of multimedia communication (e.g., Video Streaming, P2P, IP-Telephony, Cloud Computing and Service-oriented Architectures) will be examined thoroughly. The course is designed as follow-up to Communication Networks I.</p>				
<b>3</b>	<p><b>Recommended prerequisite for participation</b></p> <p>Basic courses of first 4 semesters are required. Knowledge in the topics covered by the course Communication Networks I is recommended. Theoretical knowledge obtained in the course Communication Networks II will be strengthened in practical programming exercises. So, basic programming skills are beneficial.</p>				
<b>4</b>	<p><b>Form of examination</b></p> <p>Module final exam:</p> <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written Examination, duration: 120 min, standard grading system)</li> </ul>

## 2 Optional Fundamentals

<b>Module name</b> Information Theory II					
<b>Module Nr.</b> 18-pe-2010	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This lecture course is devoted to advances of network information theory. Outline: overview of Shannon capacity, outage and ergodic capacity, capacity of channels with state, capacity of Gaussian vector channels, capacity regions of multi-user channels, capacity regions of multiple-access and broadcast fading channels, interference channel, relay channel, multiuser bounds, multi-user diversity, wiretap channel, secrecy rate and physical layer security.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand advanced concepts and strategies in network information theory.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of basic communication theory				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, BSc iST, MSc Wi-ETiT, MSc iCE, BSc/MSc CE

<b>Module name</b> Antennas and Adaptive Beamforming					
<b>Module Nr.</b> 18-jk-2020	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> <p>Overview of most important antenna parameters types as well as their applications. Fundamental theories: Fourier transform for far-field pattern calculations, antenna modeling techniques, antenna synthesis methods, image theory, determination of field regions of line sources, of the average radiated power density and power, directivity and gain. Antennas as key elements in power budgets of radio links, introducing the effective aperture of an antenna, deriving the relation between gain and effective aperture. Array antennas are a key hardware for beamforming and smart antenna systems: fundamentals of phased-scanning arrays, non-uniformly excited, equally spaced linear arrays, multi-dimensional planar arrays and mutual coupling effects. Wire antennas: still the most prevalent of all antenna forms, relatively simple in concept, easy to construct, very inexpensive. Antenna radiation fields and antenna parameters for different types of antennas are derived from Maxwell's equations, applied for aperture antennas (horns, lenses or reflector antennas) and printed antennas (microstrip-patch and coplanar-slot antennas) Some basic numerical calculation methods: integral equation methods in the time and frequency domain, physical optics and uniform theory of diffraction are briefly summarized and compared for antennas and scattering problems. Smart antennas in communication and radar systems, with focus on beam steering and adaptive beamforming.</p>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> <p>Students will know basic antenna parameters: pattern, gain, directivity, half-power beamwidth, side-lobe-level, efficiency and input impedance to compare, assess and evaluate different antennas for various applications and operating frequencies. The antenna field regions, reactive near-field, near-field and far-field, can be differentiated and the far-field pattern of an antenna can be determined from given current distributions along the antenna by using Fourier transformation or integral solutions with distributed ideal dipoles as basic elements (antenna analysis). To assess in general physical requirements, constraints and limitations of antennas, students can use fundamental antenna theory: impedance matching techniques, antenna modeling and far-field pattern analysis, antenna synthesis, image theory and fundamental limits of electrically small antennas. After being incorporated into the different adaptive beamforming techniques, the array theory enables the student to design antenna systems that are assembled of a certain number of separate elements, feeding network, beamforming network etc. for phased-scanning or smart antennas in communications and sensing. Moreover, students are able to determine, analyze and evaluate the most important classes of antennas in wireless technology for many applications, operating frequencies, desired requirements or practical constraints: (1.) wire- dipole antennas, (2.) planar antennas (microstrip, dipole and slot antennas), (3.) aperture antennas (horn antennas, parabolic reflector antennas, lens antennas, Cassegrain and Gregorian double-reflector configurations), (4.) broadband and frequency-independent antennas (V antennas, biconical antennas, helical antennas, spiral and log-periodic antennas).</p>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Fundamentals of Communications, Microwave Engineering 1

<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Thorsten Strufe		
<b>1</b>	<p><b>Content</b></p> <p>Mobile communications and wireless networking technology has seen a thriving development in recent years. The integrated course addresses the characteristics/principles of mobile networks in detail, and practical solutions are presented. Hereby our focus is on the network layer, which is often regarded as the glue of communication systems. In addition to describing the state of the art in technology we discuss actual research problems and learn about methodologies to approach such problems systematically. The contents of the course will be deepened by exercises.</p> <p>Course contents:</p> <ul style="list-style-type: none"> <li>- Introduction to mobile and wireless communications: Applications, history, market vision</li> <li>- Overview of wireless transmission: frequencies &amp; regulations, signals, antennas, signal propagation, multiplexing, modulation, spread spectrum, cellular systems</li> <li>- Medium access control in the wireless domain: SDMA, FDMA, CDMA TDMA (fixed, Aloha, CSMA, DAMA, PRMA, MACA, collision avoidance, polling)</li> <li>- Wireless local area networks: IEEE 802.11 standard including physical layer, MAC layer and access schemes, quality of service and power management</li> <li>- Wireless metropolitan area networks: Wireless mesh networks, IEEE 802.16 standard including modes of operation, medium access control, quality of service and scheduling</li> <li>- Mobility at network layer: Concepts to support mobility on various layers, Mobile IP</li> <li>- Ad hoc networks: Terminology, basics and applications, characteristics of ad hoc communication, ad hoc routing paradigms and protocols</li> <li>- Performance evaluation of mobile networks: Overview of performance evaluation, systematic approach / common mistakes and how to avoid them, experimental design and analysis</li> <li>- Mobility at transport layer: Variants of TCP (indirect TCP, snoop TCP, mobile TCP, wireless TCP)</li> <li>- Mobility at application layer. Outlook: Applications for mobile networks and wireless sensor networks</li> </ul>				
<b>2</b>	<p><b>Learning objectives / Learning Outcomes</b></p> <p>After successfully attending the course, students have an in-deep knowledge on the working of mobile communication networks. They have gained insight into media access control mechanisms dedicated to wireless communication and have a thorough understanding of mechanisms based on the network and the transport layers, with a focus on ad hoc and mesh networks. Moreover, the students have acquired knowledge about the connections between the different protocol layers and are able to apply the acquired knowledge on methodological analysis of real communication systems. The students are therefore be conversant with the characteristics and basic principles of wireless and mobile communications in theory and practice. The exercise-parts of the integrated course deepen the theoretical foundations by means of exercises, which consist of literature, calculation as well as practical implementation/application examples.</p>				
<b>3</b>	<p><b>Recommended prerequisite for participation</b></p> <p>Basic courses in Communication Networks are recommended.</p>				
<b>4</b>	<p><b>Form of examination</b></p> <p>Module accompanying exam:</p> <ul style="list-style-type: none"> <li>• [20-00-0748-iv] (Technical examination, Written/Oral Examination, Standard BWS)</li> </ul>				
<b>5</b>	<p><b>Grading</b></p> <p>Module accompanying exam:</p> <ul style="list-style-type: none"> <li>• [20-00-0748-iv] (Technical examination, Written/Oral Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<p><b>Usability of this module</b></p>

<b>Module name</b> Applied Superconductivity					
<b>Module Nr.</b>	<b>Credit Points</b>	<b>Workload</b>	<b>Self study</b>	<b>Duration</b>	<b>Cycle offered</b>
18-bf-2030	3 CP	90 h	60 h	1	SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. Oliver Boine-Frankenheim		
<b>1</b>	<b>Content</b> <ul style="list-style-type: none"> <li>• Basics of electrical conductivity at DC and RF</li> <li>• Kamerligh-Onnes experiment, Meissner effect</li> <li>• Superconductor state diagram</li> <li>• London equations, Typ I / II Superconductor</li> <li>• Cooper pairs (briefly: BCS theory, GL theory)</li> <li>• Flux quantization, Flux vortices</li> <li>• AC superconductivity, two fluid model, RF cavities</li> <li>• Cooper pair tunneling, Josephson junctions</li> <li>• Metrology: SQUIDs, (quantum-) Hall effect</li> <li>• Superconductor magnetization, Hysteresis, Bean's model</li> <li>• Applications: Magnets in accelerator and medical technology, precision field and current measurements, energy engineering</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> The students obtain a phenomenological understanding of superconductivity, which enables them to apply superconductors in engineering practice. Starting from Maxwellian electrodynamics, superconductors are introduced as perfect conductors at zero frequency. Both their DC and AC properties are discussed. Theory shall be reduced as much as possible. Quantum mechanics is not a requirement for the course, however, simplified quantum mechanical models will be introduced. The focus of the lecture is put on applications, e.g. magnet technology or precision metrology.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Electrodynamics (Maxwell's equations)				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>

<b>Module name</b> Microwave Measurement Technologies					
<b>Module Nr.</b> 18-jk-2090	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> Introduction to microwave measurement technologies, high frequency components and their properties: rf power measurement, spectrum analysis, vector network analysis (s-parameter, x-parameter, calibration techniques), on-wafer measurements, load/source-pull, material characterization				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> By this module, Students will be enabled to understand the basic principles of microwave measurement technologies. They are able to use them in measurement applications. The following objectives are linked to the lecture: <ul style="list-style-type: none"> <li>• The students understand the basic features of the power measurements and the effects of a mismatch or pulsed signals and can independently carry out and interpret measurements.</li> <li>• The students understand the basics of spectrum analysis and can carry out and interpret measurements independently.</li> <li>• The students understand the basics of s-parameter measurements and calibration of network analyzers and can carry out and interpret measurements independently</li> <li>• Students are familiar with various methods for material characterization</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Recommended: Grundlagen der Nachrichtentechnik, Hochfrequenztechnik I				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 45 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc etit, MSc WI-etit, MSc iCE, MSc iST

<b>Module Nr.</b> 18-jk-2060	<b>Credit Points</b> 8 CP	<b>Workload</b> 240 h	<b>Self study</b> 180 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> Groups of 2-3 students per project. Students work out a well defined fundamental or actual research-related problem. The projects will be actualized in each cycle being offered and introduced at the beginning. Each group will be supervised individually. The projects comprises modern antennas for multitudinous applications, electronically-steerable antennas, RFIDs, RF sensors, adaptive tunable components such as matching networks, filter, passive mixer and modulator for next-generation mobile terminals and sensor systems.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Research-oriented Project Seminar in groups of 2-3 students per project with individual supervision. Students will learn <ul style="list-style-type: none"> <li>• how to solve scientific hardware-oriented problems</li> <li>• working out concepts</li> <li>• how to design, realize and characterize RF devices</li> <li>• how to use commercial software and characterization tools</li> <li>• to evaluate and discuss their work in the context of the state-of-art in this field</li> <li>• to write a brief scientific report about their work</li> <li>• to present and discuss their results at the end of the Project Seminar</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Fundamentals of Microwave Engineering I and Antennas and Adaptive Beamforming				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iCE, Wi-ETiT				
<b>7</b>	<b>References</b> Publications will be hand out to them. Software and characterization tools as well as tools to realize RF devices are available.

## 3.2 Electronic System Design

### 3.2.1 Lectures

<b>Module name</b> Computer Systems II					
<b>Module Nr.</b> 18-hb-2030	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> German			<b>Module owner</b> Prof. Dr.-Ing. Christian Hochberger		
<b>1</b>	<b>Content</b> <ul style="list-style-type: none"> <li>• Configurable Technologies</li> <li>• FPGA architectures and properties</li> <li>• System-On-Chip, HW components, SW toolchain, support SW</li> <li>• Coarse grained reconfigurable architectures, PE architecture, Modulo scheduling</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After completion of the module, students know reconfigurable technologies as well as chip architecture that employ them (e.g. FPGAs and CGRAs). They can select an appropriate technology for a given specific application. They know the components a system-on-chip (SoC) consists of. Students can configure and program an application specific SoC. They can map simple applications to a CGRA and know the limitations and pitfalls of this mapping.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Thorough basic knowledge of digital circuits and computer architecture. as can be obtained in the lectures “Logischer Entwurf” and “Rechnersysteme I”. Additionally, students should be able to write simple programs in the programming language C.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iST, MSc iCE, MSc Wi-ETiT				
<b>7</b>	<b>References</b> The slides (in German) of the lecture can be obtained through moodle.				
<b>Courses</b>					
	<b>Course Nr.</b> 18-hb-2030-vl	<b>Course name</b> Computer Systems II			
	<b>Instructor</b> Prof. Dr.-Ing. Christian Hochberger			<b>Type</b> Lecture	<b>SWS</b> 3
	<b>Course Nr.</b> 18-hb-2030-ue	<b>Course name</b> Computer Systems II			
	<b>Instructor</b> Prof. Dr.-Ing. Christian Hochberger			<b>Type</b> Practice	<b>SWS</b> 1

<b>Module name</b> Low-Level Synthesis					
<b>Module Nr.</b> 18-hb-2010	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Christian Hochberger		
<b>1</b>	<b>Content</b> The module deals with synthesis steps on all abstraction layers below the register transfer level focusing on approaches suitable for FPGAs. At the logic level different types of minimization are explained (exact and heuristic two level minimizations, exact and heuristic multi level logic minimizations). The transition to the technology level is achieved by different decomposition and structural mapping techniques (FlowMap). Place&Route add geometric information to the technology mapped circuit. Analytical and heuristic placers are discussed (Simulated Annealing, Genetic Placers) and routing is illustrated through the PathFinder algorithm.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After completion of the module, students are enabled to investigate synthesis approaches for low level synthesis tasks. They can evaluate these approaches regarding their time and space complexity, as well as regarding their applicability to specific implementation technologies. Students can apply these approaches to new architectures and technologies.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of hardware synthesis on the basis of at least one hardware description language is required (e.g. Reese/Thornton: Introduction to Logic Synthesis Using Verilog Hdl oder Brown/Vranesic: Fundamentals of Digital Logic with VHDL Design). The student should have basic knowledge of at least one object oriented programming language, preferably Java				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Oral Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iCE, MSc iST				
<b>7</b>	<b>References</b> A script of the lecture (in German) and English foils can be obtained from here: <a href="http://www.rs.tu-darmstadt.de/">http://www.rs.tu-darmstadt.de/</a>				
<b>Courses</b>					
	<b>Course Nr.</b> 18-hb-2010-vl	<b>Course name</b> Low-Level Synthesis			
	<b>Instructor</b> Prof. Dr.-Ing. Christian Hochberger			<b>Type</b> Lecture	<b>SWS</b> 3

	<b>Instructor</b> Prof. Dr.-Ing. Christian Hochberger			<b>Type</b> Practice	<b>SWS</b> 1

<b>Module name</b> High-Level Synthesis					
<b>Module Nr.</b> 18-hb-2020	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Christian Hochberger		
<b>1</b>	<b>Content</b> <ul style="list-style-type: none"> <li>• Mapping of behavioral descriptions (e.g. in the form of program fragments) on FPGA and CGRA structures</li> <li>• Sub-tasks allocation, scheduling, binding</li> <li>• Exact or heuristic solutions</li> <li>• Design principles of heuristic solutions</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students that have completed this module know alternative approaches for all of the tasks of the high level synthesis and can select appropriate ones for specific applications. They can evaluate the memory and time complexity of the given algorithms. They are enabled to adapt the algorithms for new constraints and new target technologies.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of hardware synthesis on the basis of at least one hardware description language is required (e.g. Reese/Thornton: Introduction to Logic Synthesis Using Verilog Hdl oder Brown/Vranesic: Fundamentals of Digital Logic with VHDL Design). The student should have basic knowledge of at least one object oriented programming language, preferably Java				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>

<b>Module name</b> Real-Time Systems					
<b>Module Nr.</b> 18-su-2020	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German			<b>Module owner</b> Prof. Dr. rer. nat. Andreas Schürr		
<b>1</b>	<b>Content</b> The lecture basically covers a model-driven software engineering process which is specially customized for real-time systems. This process is more deeply explored in the exercise using an automotive example. A focus is laid on object-oriented techniques. In this context, the real-time specific CASE tool Rhapsody is introduced and used. Furthermore, fundamental characteristics of real-time systems and system architectures are introduced. Scheduling algorithms are discussed to get insights into real-time operating systems. Finally, a comparison between the Java programming language and its expansion for real-time operating systems (RT Java) will conclude the lecture.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students, who have successfully attended this lecture have acquired skills needed for the model-driven and object-oriented development of embedded real-time systems. This includes a deeper understanding of the following topics: <ul style="list-style-type: none"> <li>• classification of real-time systems</li> <li>• create and analyze executable models</li> <li>• application of real-time scheduling algorithms</li> <li>• evaluation and comparison of pros/cons of real-time programming languages as well as real-time operating systems</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Basic knowledge of software engineering techniques and excellent knowledge of at least one object-oriented programming language (preferably Java)				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, weighting: 100%)</li> </ul>

<b>Module name</b> Model-Based Software Development Lab					
<b>Module Nr.</b> 18-su-2030	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 135 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German			<b>Module owner</b> Prof. Dr. rer. nat. Andreas Schürr		
<b>1</b>	<b>Content</b> In this course, students learn the model-based software development technique in the context of annually changing application areas and software development tasks. These tasks include the definition of a domain-specific language with analysis tools and code generators as well as the development of a concrete application with these tools. Usually mixed teams (of ETiT, iST and Computer Science students) perform the whole development cycle from project planning to acceptance test. The supervisors act primarily as “client” next to their advisor role. The focus is laid on Software Analysis and Design tasks, whereas Software Quality Assurance plays a minor role.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students having successfully participated in this project seminar, are able to autonomously organize and perform a smaller model-based software development project for a given problem. The participants acquire the following skills: <ul style="list-style-type: none"> <li>• Goal-oriented literature research</li> <li>• Client-oriented creation of requirements specification</li> <li>• Daily application of version-, configuration- and change management tools</li> <li>• Creation of executable models in the context of existing software architectures</li> <li>• Improved presentation techniques Cooperation and communication with team members</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Basic knowledge of software engineering techniques and knowledge of an object-oriented programming language				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iST, MSc Wi-ETiT, MSc Informatik

<b>Module Nr.</b> 18-hb-2040	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 135 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> German			<b>Module owner</b> Prof. Dr.-Ing. Christian Hochberger		
<b>1</b>	<b>Content</b> Students will work in small groups in this course. Topics and application context will be defined individually for each group. All projects will follow the same approach. At first, the given problem will be described in a programmatic way. Following, it will be implemented by a reconfigurable system. Depending on the nature of the application, either predefined architectures will be used, parameterizable architectures will be adapted to the needs of the application or new architectures may be designed. The programmatic description will now be mapped (semi-)automatically to the chosen architecture with the help of the supporting tools. Usually, this requires to rewrite the programmatic description to better suit the tools. Finally, the solution will be evaluated using some benchmark data sets.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Successful students will know how to use reconfigurable systems within a given application context. They can use tools to program these systems and know how to map an application onto a given reconfigurable architecture. They are capable to evaluate the performance critical parts of an application. They understand the implications of different coding styles for a particular task.				
<b>3</b>	<b>Recommended prerequisite for participation</b> <ul style="list-style-type: none"> <li>• Knowledge of reconfigurable devices (cf. course computer systems II)</li> <li>• Knowledge of computer architecture (cf. course computer systems I)</li> <li>• Solid programming skills (either in C or Java depending on the application scenario).</li> </ul>				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, weighting: 100%)</li> </ul>

<b>1</b>	<b>Content</b> In this course, the students produce scientific reports from changing subject areas. Each student has to explore a subject related to IT system development and produce a written report as well as a final talk with a presentation. A list of the subjects of the current semester is available at <a href="http://www.es.tu-darmstadt.de/lehre/sst">www.es.tu-darmstadt.de/lehre/sst</a> .				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After a successful participation, the students will be able to explore an unknown topic under scientific aspects. The students learn to support the exploration by a literature research and to analyze the subject critically. They achieve the skills to present a definite subject in a written report as well as in an oral presentation.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Basic knowledge in software engineering and programming languages

### 3.3 Communication Technology

#### 3.3.1 Lectures

<b>Module name</b> Adaptive Filters					
<b>Module Nr.</b> 18-zo-2010	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Abdelhak Zoubir		
<b>1</b>	<p><b>Content</b></p> <p><b>Theory:</b></p> <p>1) Derivation of optimal filters for stochastic processes, e.g. Wiener filter or linear prediction filter based on suitable cost functions.</p> <p>2) Elaboration of adaptive procedures, which allow to iteratively approach the optimal solution for non-stationary signals in non-stationary environments. Here, the adaptive procedures such as NLMS adaptation, affine projection, and the RLS algorithm are derived and extensively analysed.</p> <p>3) Analysis of the adaptation behaviour and control procedures of adaptive filters based on the NLMS procedure.</p> <p>4) Derivation and analysis of the Kalman filter as optimal filter for non-stationary input signals.</p> <p>5) Procedures for the decomposition of signals into sub-bands for the realization of optimal filters in the frequency domain, e.g. noise reduction procedures.</p> <p><b>Applications:</b></p> <p>Parallel to the theory, practical applications are explained. As an example for the Wiener filter, the acoustic noise reduction procedures are explained. Acoustic echo cancellation and feedback cancellation are given as examples for adaptive filters. Furthermore beamforming approaches are introduced.</p> <p>It is planned to offer an excursion to Siemens Audiology Engineering Group in Erlangen.</p> <p>In the 4 to 5 exercises, some content of the lecture will be implemented in MATLAB which allows the students to get familiar with practical realizations of the theoretical procedures.</p>				
<b>2</b>	<p><b>Learning objectives / Learning Outcomes</b></p> <p>During the lecture, basics of adaptive filters are taught. The necessary algorithms are derived, interpreted and applied to examples of speech, audio and video processing.</p> <p>Based on the content of the lecture you are able to apply adaptive filters to real practical applications.</p> <p>For the admission to the exam you give a talk about a topic in the domain of adaptive filters chosen by you. This will allow you to acquire the know-how to read and understand scientific literature, familiarize yourself with an unknown topic and present your knowledge, such as it will be certainly required from you in your professional life as an engineer.</p>				
<b>3</b>	<p><b>Recommended prerequisite for participation</b></p> <p>Digital Signal Processing</p>				
<b>4</b>	<p><b>Form of examination</b></p> <p>Module final exam:</p> <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>

<b>Module name</b> Antennas and Adaptive Beamforming					
<b>Module Nr.</b>	<b>Credit Points</b>	<b>Workload</b>	<b>Self study</b>	<b>Duration</b>	<b>Cycle offered</b>
18-jk-2020	6 CP	180 h	120 h	1	WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> Overview of most important antenna parameters types as well as their applications. Fundamental theories: Fourier transform for far-field pattern calculations, antenna modeling techniques, antenna synthesis methods, image theory, determination of field regions of line sources, of the average radiated power density and power, directivity and gain. Antennas as key elements in power budgets of radio links, introducing the effective aperture of an antenna, deriving the relation between gain and effective aperture. Array antennas are a key hardware for beamforming and smart antenna systems: fundamentals of phased-scanning arrays, non-uniformly excited, equally spaced linear arrays, multi-dimensional planar arrays and mutual coupling effects. Wire antennas: still the most prevalent of all antenna forms, relatively simple in concept, easy to construct, very inexpensive. Antenna radiation fields and antenna parameters for different types of antennas are derived from Maxwell's equations, applied for aperture antennas (horns, lenses or reflector antennas) and printed antennas (microstrip-patch and coplanar-slot antennas) Some basic numerical calculation methods: integral equation methods in the time and frequency domain, physical optics and uniform theory of diffraction are briefly summarized and compared for antennas and scattering problems. Smart antennas in communication and radar systems, with focus on beam steering and adaptive beamforming.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will know basic antenna parameters: pattern, gain, directivity, half-power beamwidth, side-lobe-level, efficiency and input impedance to compare, assess and evaluate different antennas for various applications and operating frequencies. The antenna field regions, reactive near-field, near-field and far-field, can be differentiated and the far-field pattern of an antenna can be determined from given current distributions along the antenna by using Fourier transformation or integral solutions with distributed ideal dipoles as basic elements (antenna analysis). To assess in general physical requirements, constrains and limitations of antennas, students can use fundamental antenna theory: impedance matching techniques, antenna modeling and far-field pattern analysis, antenna synthesis, image theory and fundamental limits of electrically small antennas. After being incorporated into the different adaptive beamforming techniques, the array theory enables the student to design antenna systems that are assembled of a certain number of separate elements, feeding network, beamforming network etc. for phased-scanning or smart antennas in communications and sensing. Moreover, students are able to determine, analyze and evaluate the most important classes of antennas in wireless technology for many applications, operating frequencies, desired requirements or practical constrains: (1.) wire- dipole antennas, (2.) planar antennas (microstrip, dipole and slot antennas), (3.) aperture antennas (horn antennas, parabolic reflector antennas, lens antennas, Cassegrain and Gregorian double-reflector configurations), (4.) broadband and frequency-independent antennas (V antennas, biconical antennas, helical antennas, spiral and log-periodic antennas).				
<b>3</b>	<b>Recommended prerequisite for participation</b> Fundamentals of Communications, Microwave Engineering 1

<b>2</b>	<b>Learning objectives / Learning Outcomes</b> The lecture communicates mathematical basics needed to solve computer vision problems in the field of engineering. The focus is on methods that are relevant for measuring and control tasks. Applications range from visual quality inspection, visual robotics, photogrammetry, visual odometry up to visually guided driver assistance etc. The students should obtain a good understanding for the relations between the three-dimensional world and its two-dimensional projection onto the image plane of a camera. They also should learn about methods that exist to infer knowledge from the world given image data. They should develop some feeling for the different kinds of problems that arise in computer vision and how to choose an efficient solution in terms of algorithms.

<b>Module name</b> MIMO - Communication and Space-Time-Coding					
<b>Module Nr.</b> 18-pe-2030	<b>Credit Points</b> 4 CP	<b>Workload</b> 120 h	<b>Self study</b> 75 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This lecture course introduces the principles of space-time and multiple-input multiple-output (MIMO) communications. Outline: Motivation and background; overview of space-time and MIMO communications; fading MIMO channel models, MIMO information theory, receive and transmit diversity; channel estimation, MIMO detectors, Alamouti space-time block code, orthogonal space-time block codes; linear dispersion codes; coherent and non-coherent decoders, differential space-time block coding; MIMO with limited feedback, Multiantenna- and multiuser diversity, BER performance analysis, MIMO in modern wireless communication networks, multicell and multiuser MIMO (coordinated multipoint).				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand modern MIMO communications and existing space-time coding techniques.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of basic communication theory and basic information theory.				
<b>4</b>	<b>Form of examination</b> Module final exam: • Module exam (Technical examination, Optional, standard grading system)				
<b>5</b>	<b>Grading</b> Module final exam: • Module exam (Technical examination, Optional, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b> MSc ETiT

<b>Module name</b> Speech and Audio Signal Processing					
<b>Module Nr.</b> 18-zo-2070	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> German			<b>Module owner</b> Prof. Dr.-Ing. Henning Puder		
<b>1</b>	<b>Content</b> Algorithms of speech and audio signal processing: Introduction to the models of speech and audio signals and basic methods of audio signal processing. Procedures of codebook based processing and audio coding. Beamforming for spatial filtering and noise reduction for spectral filtering. Cepstral filtering and fundamental frequency estimation. Mel-filterind cepstral coefficients (MFCCs) as basis for speaker detection and speech recognition. Classification methods based on GMM (Gaussian mixture models) and speech recognition with HMM (Hidden markov models). Introduction to the methods of music signal processing, e.g. Shazam-App or beat detection.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Based on the lecture you acquire an advanced knowledge of digital audio signal processing mainly with the help of the analysis of speech signals. You learn about different basic and advanced methods of audio signal processing, to range from the theory to practical applications. You will acquire knowledge about algorithms such as they are applied in mobile telephones, hearing aids, hands-free telephones, and man-machine-interfaces (MMI). The exercise will be organized as a talk given by each student with one self-selected topic of speech and audio processing. This will allow you to acquire the know-how to read and understand scientific literature, familiarize with an unknown topic and present your knowledge, such as it will be certainly required from you in your professional life as an engineer.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowlegde about satistical signal processing is required (lecture „Digital Signal Processing“). Desired – but not mandatory – is knowledge about adaptive filters.				
<b>4</b>	<b>Form of examination</b> Module final exam: • Module exam (Technical examination, Special Form, duration: 20 min, standard grading system)				
<b>5</b>	<b>Grading</b> Module final exam: • Module exam (Technical examination, Special Form, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iCE				
<b>7</b>	<b>References</b> Slides (for further details see homepage of the lecture)

<b>Module name</b> Terahertz Systems and Applications					
<b>Module Nr.</b> 18-pr-2010	<b>Credit Points</b> 4 CP	<b>Workload</b> 120 h	<b>Self study</b> 75 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> English			<b>Module owner</b> Prof. Dr. rer. nat. Sascha Preu		
<b>1</b>	<b>Content</b> The lecture will give an overview of Terahertz applications, sources and detectors with the focus on semiconductor-based devices and Terahertz systems. Terahertz detection and generation will be discussed in detail for two types of highly important devices: Schottky diodes (mixers, multipliers and rectifiers) and photomixers (photo-diode based and photoconductive). The exercise, where performance parameters of the discussed devices will be derived for experimentally relevant cases, will help to deepen the understanding. The last day will be used for a lab tour showing our measurements facilities and hands-on experiments.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After attending this lecture, the student has gained basic knowledge in the fields of THz generation, detection, systems, and applications of THz radiation, with deepened knowledge in: *Working principle, spectra and limits of continuous-wave photomixers *Working principle of Schottky diode mixers/multipliers and rectifiers in the THz range *THz Applications				
<b>3</b>	<b>Recommended prerequisite for participation</b> Recommended: Bachelor in Electrical engineering, Physics, or Material Science Helpful: Basic knowledge in semiconductor physics, High frequency 1				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Oral Examination, weighting: 100%)</li> </ul>

<b>Module name</b> Microwave Measurement Technologies					
<b>Module Nr.</b> 18-jk-2090	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> Introduction to microwave measurement technologies, high frequency components and their properties: rf power measurement, spectrum analysis, vector network analysis (s-parameter, x-parameter, calibration techniques), on-wafer measurements, load/source-pull, material characterization				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> By this module, Students will be enabled to understand the basic principles of microwave measurement technologies. They are able to use them in measurement applications. The following objectives are linked to the lecture: <ul style="list-style-type: none"> <li>• The students understand the basic features of the power measurements and the effects of a mismatch or pulsed signals and can independently carry out and interpret measurements.</li> <li>• The students understand the basics of spectrum analysis and can carry out and interpret measurements independently.</li> <li>• The students understand the basics of s-parameter measurements and calibration of network analyzers and can carry out and interpret measurements independently</li> <li>• Students are familiar with various methods for material characterization</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Recommended: Grundlagen der Nachrichtentechnik, Hochfrequenztechnik I				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 45 min, standard grading system)</li> </ul>

<b>Module name</b> Matrix Analysis and Computations					
<b>Module Nr.</b> 18-pe-2070	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This graduate course is a foundation class on matrix analysis and computations, which are widely used in many different fields, e.g., machine learning, computer vision, systems and control, signal and image processing, communications, networks, optimization, and many more. . . Apart from the theory this course will also cover the design of efficient algorithm and it considers many different examples from the aforementioned fields including examples from social media and big data analysis, image processing and medical imaging, communication network optimization, and written text classification. Specific topics: (i) basic matrix concepts, subspace, norms, (ii) linear least squares (iii) eigendecomposition, singular value decomposition, positive semidefinite matrices, (iv) linear system of equations, LU decomposition, Cholesky decomposition (v) pseudo-inverse, QR decomposition (vi) advanced tensor decomposition, advanced matrix calculus, compressive sensing, structured matrix factorization				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will learn matrix analysis and computations at an advanced or research level.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Basic knowledge in linear algebra.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>

### 3.3.2 Seminars

<b>Module name</b> Project Seminar Advanced $\mu$ Wave Components & Antennas					
<b>Module Nr.</b> 18-jk-2060	<b>Credit Points</b> 8 CP	<b>Workload</b> 240 h	<b>Self study</b> 180 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> Groups of 2-3 students per project. Students work out a well defined fundamental or actual research-related problem. The projects will be actualized in each cycle being offered and introduced at the beginning. Each group will be supervised individually. The projects comprises modern antennas for multitudinous applications, electronically-steerable antennas, RFIDs, RF sensors, adaptive tunable components such as matching networks, filter, passive mixer and modulator for next-generation mobile terminals and sensor systems.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Research-oriented Project Seminar in groups of 2-3 students per project with individual supervision. Students will learn <ul style="list-style-type: none"> <li>• how to solve scientific hardware-oriented problems</li> <li>• working out concepts</li> <li>• how to design, realize and characterize RF devices</li> <li>• how to use commercial software and characterization tools</li> <li>• to evaluate and discuss their work in the context of the state-of-art in this field</li> <li>• to write a brief scientific report about their work</li> <li>• to present and discuss their results at the end of the Project Seminar</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Fundamentals of Microwave Engineering I and Antennas and Adaptive Beamforming				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Oral Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iCE, Wi-ETiT				
<b>7</b>	<b>References</b> Publications will be hand out to them. Software and characterization tools as well as tools to realize RF devices are available.

<b>Module name</b> Projekt Seminar Procedures for Massive MIMO and 5G					
<b>Module Nr.</b> 18-pe-2050	<b>Credit Points</b> 8 CP	<b>Workload</b> 240 h	<b>Self study</b> 180 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This project-seminar introduces the basics concepts of the signal processing algorithms and cross-layer procedures for extremely large so-called Massive MIMO systems and mobile communication networks of the 5th generation (5G). In Massive MIMO systems the number of base transmit and receive antennas at the base station are scaled up, as compared to usual MIMO systems, by several orders of magnitude. In this seminar we investigate advanced signal processing algorithms which allow to exploit the advantages of Massive MIMO in an optimum way (which are high data rate, high reliability, favorable propagation characteristics), to cope with the enormous data volume (linear signal processing) and to master the challenges (pilot contamination, low-cost hardware). Massive MIMO is an integral part of the emerging 5G mobile communication networks. In the course of the seminar the fundamental concepts and challenges of 5G networks will be discussed. It includes concepts as Small Cells, Cloud RAN, Network Virtualization, Network slicing, Machine-to-Machine communication, Millimeter Wave Transmission, Flexible Waveforms, etc.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will learn the fundamental concepts, procedures, theories, algorithms and applications of Massive MIMO systems and 5 G mobile communication networks by the latest scientific publications.				
<b>3</b>	<b>Recommended prerequisite for participation</b>				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Study achievements, Oral Examination, duration: 40 min, standard grading system)</li> </ul>

<b>Module name</b> Project Seminar Electromagnetic CAD					
<b>Module Nr.</b> 18-dg-1060	<b>Credit Points</b> 8 CP	<b>Workload</b> 240 h	<b>Self study</b> 180 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Herbert De Gersem		
<b>1</b>	<b>Content</b> Work on a more complex project in numerical field calculation using commercial tools or own software.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will be able to simulate complex engineering problems with numerical field simulation software. They are able to estimate modelling and numerical errors. They know how to present the results on a scientific level in talks and a paper. Students are able to organize teamwork.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Good understanding of electromagnetic fields, knowledge about numerical simulation methods.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Study achievements, Oral Examination, duration: 20 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Study achievements, Oral Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT				
<b>7</b>	<b>References</b> Course notes "Computational Electromagnetics and Applications I-III", further material is provided.				
<b>Courses</b>

<b>Module name</b> Signal Detection and Parameter Estimation					
<b>Module Nr.</b>	<b>Credit Points</b>	<b>Workload</b>	<b>Self study</b>	<b>Duration</b>	<b>Cycle offered</b>
18-zo-2050	8 CP	240 h	180 h	1	SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Abdelhak Zoubir		
<b>1</b>	<b>Content</b> Signal detection and parameter estimation are fundamental signal processing tasks. In fact, they appear in many common engineering operations under a variety of names. In this course, the theory behind detection and estimation will be presented, allowing a better understanding of how (and why) to design “good” detection and estimation schemes. These lectures will cover: Fundamentals Detection Theory Hypothesis Testing Bayesian Tests Ideal Observer Tests Neyman-Pearson Tests Receiver Operating Characteristics Uniformly Most Powerful Tests The Matched Filter Estimation Theory Types of Estimators Maximum Likelihood Estimators Sufficiency and the Fisher-Neyman/Factorisation Criterion Unbiasedness and Minimum variance Fisher Information and the CRB Asymptotic properties of the MLE				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students gain deeper knowledge in signal processing based on the fundamentals taught in DSP and ETiT 4. They will study advanced topics of statistical signal processing in the area of detection and estimation. In a sequence of 4 lectures, the basics and important concepts of detection and estimation theory will be taught. These will be studied in depth by implementation of the methods in MATLAB for practical examples. In sequel, students will perform an independent literature research, i.e. choosing an original work in detection and estimation theory which they will illustrate in a final presentation. This will support the students with the ability to work themselves into a topic based on literature research and to adequately present their knowledge. This is especially expected in the scope of the students' future research projects or in their professional career.				
<b>3</b>	<b>Recommended prerequisite for participation</b> DSP, general interest in signal processing				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, weighting: 100%)</li> </ul>

#### Courses

Course Nr.	Course name		
18-zo-2050-se	Signal Detection and Parameter Estimation		
Instructor	Type	SWS	
Prof. Dr.-Ing. Abdelhak Zoubir	Seminar	4	

<b>Module name</b> Advanced Topics in Statistical Signal Processing					
<b>Module Nr.</b> 18-zo-2040	<b>Credit Points</b> 8 CP	<b>Workload</b> 240 h	<b>Self study</b> 180 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Abdelhak Zoubir		
<b>1</b>	<b>Content</b> This course extends the signal processing fundamentals taught in DSP towards advanced topics that are the subject of current research. It is aimed at those with an interest in signal processing and a desire to extend their knowledge of signal processing theory in preparation for future project work (e.g. Diplomarbeit) and their working careers. This course consists of a series of five lectures followed by a supervised research seminar during two months approximately. The final evaluation includes students seminar presentations and a final exam. The main topics of the Seminar are: <ul style="list-style-type: none"> <li>• Estimation Theory</li> <li>• Detection Theory</li> <li>• Robust Estimation Theory</li> <li>• Seminar projects: e.g. Microphone array beamforming, Geolocation and Tracking, Radar Imaging, Ultrasound Imaging, Acoustic source localization, Number of sources detection.</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students obtain advanced knowledge in signal processing based on the fundamentals taught in DSP and ETiT 4. They will study advanced topics in statistical signal processing that are subject to current research. The acquired skills will be useful for their future research projects and professional careers.				
<b>3</b>	<b>Recommended prerequisite for participation</b> DSP, general interest in signal processing is desirable.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, BSc/MSc iST, MSc iCE, Wi-ETiT				
<b>7</b>	<b>References</b> <ul style="list-style-type: none"> <li>• L. L. Scharf, Statistical Signal Processing: Detection, Estimation, and Time Series Analysis (New York: Addison-Wesley Publishing Co., 1990).</li> <li>• S. M. Kay, Fundamentals of Statistical Signal Processing: Estimation Theory (Book 1), Detection Theory (Book 2).</li> <li>• R. A. Maronna, D. R. Martin, V. J. Yohai, Robust Statistics: Theory and Methods, 2006.</li> </ul>

### 3.3.3 Laboratories

<b>Module name</b> Digital Signal Processing Lab					
<b>Module Nr.</b> 18-zo-2030	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 135 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Abdelhak Zoubir		
<b>1</b>	<b>Content</b> 1) Introduction to MATLAB 2) Discrete-Time Signals and Systems 3) Frequency-Domain Analysis using the DFT 4) Digital FIR Filter Design 5) IIR Filter Design using Analog Prototypes 6) Nonparametric Spectrum Estimation 7) Parametric Spectrum Estimation.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> The students are able to apply skills acquired in the course Digital Signal Processing. These include the design of digital FIR and IIR filters as well as non-parametric and parametric spectrum estimation. Students learn how MATLAB is used to apply theoretical concepts and to demonstrate signal processing techniques by using hands-on application examples.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Deterministic signals and systems theory				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Study achievements, Written Examination, duration: 120 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Study achievements, Written Examination, weighting: 100 %)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iCE				
<b>7</b>	<b>References</b> Lab manual				
<b>Courses</b>					
	<b>Course Nr.</b> 18-zo-2030-pr	<b>Course name</b> Digital Signal Processing Lab			
	<b>Instructor</b> Prof. Dr.-Ing. Abdelhak Zoubir			<b>Type</b> Internship	<b>SWS</b> 3

<b>Module name</b> Software Lab Computational Electromagnetics and Applications I					
<b>Module Nr.</b> 18-dg-1041	<b>Credit Points</b> 8 CP	<b>Workload</b> 240 h	<b>Self study</b> 195 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German			<b>Module owner</b> Prof. Dr.-Ing. Herbert De Gersem		
<b>1</b>	<b>Content</b> Various topics are: 1. Introduction, 2. Basics of FIT I, 3. Basics of FIT II, 4. Static problems (electrical/magnetical) (scalar potential), 5. Magnetostatic problems, frequency domain, 5. Time domain integration techniques: Leapfrog I, 7. Time domain integration techniques: Leapfrog II, 8. Other physical problems: heat conduction, 9. Other discretization methods: Finite Element Method.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand basic concepts of numerical solution techniques to field problems related to different physical domains. They will exhibit the ability to write small simulation programs in Matlab.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Recommended: "Computational Electromagnetics and Applications" (also in parallel).				
<b>4</b>	<b>Form of examination</b> Module final exam: • Module exam (Study achievements, Oral Examination, duration: 20 min, standard grading system)				
<b>5</b>	<b>Grading</b> Module final exam: • Module exam (Study achievements, Oral Examination, weighting: 100 %)				
<b>6</b>	<b>Usability of this module</b> BSc ETiT, MSc ETiT, BSc CE				
<b>7</b>	<b>References</b> Course notes will be provided.				
<b>Courses</b>					
	<b>Course Nr.</b> 18-dg-1041-pr	<b>Course name</b> Software Lab Computational Electromagnetics and Applications I			
	<b>Instructor</b> Prof. Dr.-Ing. Herbert De Gersem			<b>Type</b> Internship	<b>SWS</b> 3

### 3.4 Communication Systems

#### 3.4.1 Lectures

<b>Module name</b> Acoustics I					
<b>Module Nr.</b> 18-se-2010	<b>Credit Points</b> 3 CP	<b>Workload</b> 90 h	<b>Self study</b> 60 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> German			<b>Module owner</b> Prof. (em.) Dr. Gerhard Sessler		
<b>1</b>	<b>Content</b> 1. Basic concepts of vibrations; impedance; electromechanical analogues, 2. sound field: wave equation; plane waves; sound absorption and dispersion; room absorption, 3. sound radiation: spherical, dipole, and cardioid source; linear arrays; circular piston membrane, 4. physiological and psychological acoustics: hearing organ; acoustic perception; speech production and speech intelligibility, 5. electroacoustic transducers; reciprocity relations; electrostatic, piezoelectric, electrodynamic, and other transducers; directional microphones; microphone calibration, 6. acoustic measuring methods: measurements of fundamental acoustic quantities; acoustic testing chambers; vibration measurements, 7. analogical and digital sound recording: digital and analogical disc and magnetic tape methods; movie sound, 8. ultrasound and hypersound: generation and detection; applications				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After completion of the lecture, students possess: <ul style="list-style-type: none"> <li>• the understanding of basic phenomena of generation, propagation, reception, storage and reproduction of sound;</li> <li>• the ability to analyze acoustic components and systems;</li> <li>• the ability to judge and design applications in the audio and ultrasonic frequency ranges.</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Electrical Engineering I and II, Mathematics I to IV, Physics, Basics of Telecommunication				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT				
<b>7</b>	<b>References</b> H. Kuttruff, Akustik (Hilzel 2004); M. Zollner u. E. Zwicker, Elektroakustik, 3. Auflage (Springer, corrected reprint 1998); H. Fastl, E. <b>Courses</b>					
	<b>Course Nr.</b> 18-se-2010-v1	<b>Course name</b> Acoustics I			
	<b>Instructor</b> Prof. (em.) Dr. Gerhard Sessler			<b>Type</b> Lecture	<b>SWS</b> 2

<b>Module name</b> Information Theory I					
<b>Module Nr.</b> 18-kp-1010	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr. techn. Heinz Köppl		
<b>1</b>	<b>Content</b> This lecture course introduces the fundamentals of information and network information theory. Outline: information, uncertainty, entropy, mutual information, capacity, differential entropy, typical sequences, Gaussian channels, basics of source and channel coding, linear block codes, Shannon's source coding theorem, Shannon's channel coding theorem, capacity of Gaussian channels, capacity of bandlimited channels, Shannon's bound, bandwidth efficiency, capacity of multiple parallel channels and waterfilling, Gaussian vector channel, Multiple Access Channel, Broadcast Channel, rate region..				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand the fundamentals of classic information theory.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of basic communication theory und probability theory				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Written Examination, duration: 120 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Written Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> BSc ETiT, BSc iST, MSc iCE, BSc Wi-ETiT, BSc/MSc CE				
<b>7</b>	<b>References</b> <ol style="list-style-type: none"> <li>T.M. Cover and J.A. 	<b>Course Nr.</b> 18-kp-1010-ue	<b>Course name</b> Information Theory I			
	<b>Instructor</b> Prof. Dr. techn. Heinz Köppl			<b>Type</b> Practice	<b>SWS</b> 1

<b>Module name</b> Information Theory II					
<b>Module Nr.</b> 18-pe-2010	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This lecture course is devoted to advances of network information theory. Outline: overview of Shannon capacity, outage and ergodic capacity, capacity of channels with state, capacity of Gaussian vector channels, capacity regions of multi-user channels, capacity regions of multiple-access and broadcast fading channels, interference channel, relay channel, multiuser bounds, multi-user diversity, wiretap channel, secrecy rate and physical layer security.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand advanced concepts and strategies in network information theory.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of basic communication theory				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, weighting: 100 %)</li> </ul>

<b>Module name</b> MIMO - Communication and Space-Time-Coding					
<b>Module Nr.</b> 18-pe-2030	<b>Credit Points</b> 4 CP	<b>Workload</b> 120 h	<b>Self study</b> 75 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This lecture course introduces the principles of space-time and multiple-input multiple-output (MIMO) communications. Outline: Motivation and background; overview of space-time and MIMO communications; fading MIMO channel models, MIMO information theory, receive and transmit diversity; channel estimation, MIMO detectors, Alamouti space-time block code, orthogonal space-time block codes; linear dispersion codes; coherent and non-coherent decoders, differential space-time block coding; MIMO with limited feedback, Multiantenna- and multiuser diversity, BER performance analysis, MIMO in modern wireless communication networks, multicell and multiuser MIMO (coordinated multipoint).				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand modern MIMO communications and existing space-time coding techniques.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge of basic communication theory and basic information theory.				
<b>4</b>	<b>Form of examination</b> Module final exam: • Module exam (Technical examination, Optional, standard grading system)				
<b>5</b>	<b>Grading</b> Module final exam: • Module exam (Technical examination, Optional, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b> MSc ETiT

<b>Module name</b> Mobile Communications					
<b>Module Nr.</b> 18-kl-2020	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Anja Klein		
<b>1</b>	<b>Content</b> The lecture covers aspects of mobile communication systems with particular focus on the physical layer. Mobile radio systems, services, market, standardization duplex and multiple access techniques, cellular concept mobile radio channel, deterministic and stochastic description modulation schemes code division multiple access (CDMA) orthogonal frequency division multiplexing (OFDM) optimum and suboptimum receiver techniques cellular radio capacity and spectrum efficiency diversity methods multiple input multiple output (MIMO) systems power control and handover architecture of mobile radio systems				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After completion of the lecture, students possess <ul style="list-style-type: none"> <li>• a profound understanding of physical layer aspects ,e.g., transmission schemes, multiple access schemes of mobile communication systems, duplex schemes, multi carrier schemes, receiver techniques, multi antenna schemes</li> <li>• a profound understanding of signal propagation in mobile radio systems (mobile radio channel)</li> <li>• the ability to understand and solve problems of the field of the physical layer</li> <li>• the ability to compare, analyse and evaluate different system concepts</li> <li>• knowledge on modelling of the transmission properties of the mobile radio channel</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Electrical Engineering I and II, Deterministic Signals and Systems, Communication Technology I, Mathematics I to IV				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written Examination, duration: 90 min, standard grading system)</li> </ul>

<b>Module name</b> Microwave Measurement Technologies					
<b>Module Nr.</b> 18-jk-2090	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Rolf Jakoby		
<b>1</b>	<b>Content</b> Introduction to microwave measurement technologies, high frequency components and their properties: rf power measurement, spectrum analysis, vector network analysis (s-parameter, x-parameter, calibration techniques), on-wafer measurements, load/source-pull, material characterization				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> By this module, Students will be enabled to understand the basic principles of microwave measurement technologies. They are able to use them in measurement applications. The following objectives are linked to the lecture: <ul style="list-style-type: none"> <li>• The students understand the basic features of the power measurements and the effects of a mismatch or pulsed signals and can independently carry out and interpret measurements.</li> <li>• The students understand the basics of spectrum analysis and can carry out and interpret measurements independently.</li> <li>• The students understand the basics of s-parameter measurements and calibration of network analyzers and can carry out and interpret measurements independently</li> <li>• Students are familiar with various methods for material characterization</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Recommended: Grundlagen der Nachrichtentechnik, Hochfrequenztechnik I				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 45 min, standard grading system)</li> </ul>

<b>Module name</b> Convex Optimization in Signal Processing and Communications					
<b>Module Nr.</b> 18-pe-2020	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This graduate course introduces the basic theory of convex optimization and illustrates its use with many recent applications in communication systems and signal processing. Outline: Introduction, convex sets and convex functions, convex problems and classes of convex problems (LP, QP, SOCP, SDP, GP), Lagrange duality and KKT conditions, basics of numerical algorithms and interior point methods, optimization tools, convex inner and outer approximations for non convex problems, sparse optimization, distributed optimization, mixed integer linear and non-linear programming, applications.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will learn the basic theory of convex optimization and its applications.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge in linear algebra and the basic concepts of signal processing and communications.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Oral Examination, duration: 40 min, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>Module exam (Technical examination, Oral Examination, weighting: 100 %)</li> </ul>

<b>Module Nr.</b> 18-pe-2060	<b>Credit Points</b> 4 CP	<b>Workload</b> 120 h	<b>Self study</b> 75 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Marius Pesavento		
<b>1</b>	<b>Content</b> This lecture course introduces the principles of modern sensor array processing and adaptive beamforming. Outline: Motivation and background; applications, narrowband and wideband signal model <u>Direction-of-arrival estimation (DoA):</u> traditional methods based on beamforming, super resolution methods, Maximum-Likelihood methods, Subspace based methods, MUSIC, ESPRIT, MODE, root-MUSIC, multidimensional source localization, beamspace processing, array interpolation, partly calibrated arrays, wideband DOA estimation, spatial smoothing, forward-backward averaging, redundancy averaging, correlated sources, minimum redundancy arrays, compressed sensing and sparse reconstruction based DoA estimation, performance bounds <u>Adaptive beamforming:</u> Point-source model, covariance model, Wiener-Hopf equation, Minimum Variance Distortionless Response (MVDR) beamformer, Capon Beamformer, sample matrix inversion, signal self-nulling effect, robust adaptive beamforming, Hung-Turner projection beamformer, Generalized Sidelobe canceller beamformer, Eigenspace-based beamformer, non-stationary environments, modern convex optimization based beamforming, worst-case based beamforming, multiuser beamforming.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will standard and modern sensor array processing techniques for source localization and transmit/receive beamforming				
<b>3</b>	<b>Recommended prerequisite for participation</b> Knowledge in linear algebra.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>

<b>Module name</b> Machine Learning in Information and Communication Technology (ICT)					
<b>Module Nr.</b> 18-kp-2110	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr. techn. Heinz Köppl		
<b>1</b>	<b>Content</b> The module provides an introduction to the emerging field of machine learning from an engineering perspective. Important models and learning methods are presented and exemplified through problems from information and communication technology. <ul style="list-style-type: none"> <li>• Fundamentals of probability theory and multivariate statistics</li> <li>• Taxonomy of machine learning problems and models (supervised, unsupervised, generative, discriminative)</li> <li>• Regression and classification: theory, methods and ICT applications</li> <li>• Dimensionality reduction, clustering and big data analytics: methods and application in communications and signal processing</li> <li>• Probabilistic graphical models: categories, inference and parameter estimation</li> <li>• Fundamentals of Bayesian inference, Monte Carlo methods, Bayesian non-parametrics</li> <li>• Fundamentals of convex optimization: Solution methods and application in communications</li> <li>• Approximate algorithms for scalable Bayesian inference; application in signal processing and information theory (e.g. decoding of LDPC codes)</li> <li>• Hidden Markov models (HMM): Theory, Algorithms and ICT applications (e.g. Viterbi decoding of convolutional codes)</li> <li>• High-dimensional statistics (“large p small n” setting), learning dependency structure in high-dimensional data, learning causality relations from observational data.</li> <li>• Sparse estimation, random projections, compressive sensing: Theory and applications in signal processing</li> <li>• Deep neural networks (deep learning): Models, learning algorithms, libraries and ICT applications</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students are able to interpret and categorize specific engineering problems from the ICT domain in terms of machine learning problems. They are able to reduce such problems to standard machine learning problems and are able to determine suitable solution methods for them. They are able to implement all necessary algorithms from scratch, but they are also familiar with the state-of-the-art libraries in machine learning. They are able to determine the involved computational complexity of a method and choose an appropriate solution algorithms based on application constraints. They are able to apply the acquired methods to other domains, such as data analysis in biomedical engineering, analysis of social network data, etc.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Good command of Matlab (for instance knowledge from course 18-st-2030 Matlab Grundkurs) and engineering mathematics				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc etit, BSc/MSc iST, MSc iCE, MSc CE

## 3.5 Communication Science and Media Technology

### 3.5.1 Lectures

<b>Module name</b> Communication Networks IV					
<b>Module Nr.</b> 18-sm-2030	<b>Credit Points</b> 3 CP	<b>Workload</b> 90 h	<b>Self study</b> 60 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr.-Ing. Ralf Steinmetz		
<b>1</b>	<p><b>Content</b></p> <p>The lecture communication networks IV deals with modelling and performance evaluation of computer networks and communication systems. The emphasis is on current analytical approaches. Owing to these methods a fundamental understanding of major performance related aspects in networking is achieved and basic knowledge for planning, optimization and advancement of communications networks is provided. The relevance and implications of individual theories are illustrated using examples which are drawn mainly from the Internet. Apart from analytical methods the lecture gives an introduction to simulation of communication networks as well as measuring in real or prototypical systems and testbeds. In addition to well-known methods and their applications selected aspects of current research questions will be elaborated on.</p> <p>Topics of the lecture are:</p> <ul style="list-style-type: none"> <li>• Introduction to performance evaluation and applications</li> <li>• Leaky bucket traffic regulators, deterministic traffic models, deterministic and empirical envelopes</li> <li>• Scheduling, generalized processor sharing</li> <li>• Network calculus, min-plus systems theory, deterministic performance bounds</li> <li>• Poisson processes, Markov-chains, classical queuing theory, M M 1 and M G 1 models</li> <li>• Modeling of packet data traffic, self-similarity</li> <li>• Effective bandwidths, moment generating functions, statistical multiplexing</li> <li>• Statistical network calculus, effective envelopes, effective performance bounds</li> <li>• Simulation, generation of random numbers, distributions, confidence intervals</li> <li>• Instrumentation, measurements, bandwidth estimation in the Internet</li> </ul>				
<b>2</b>	<p><b>Learning objectives / Learning Outcomes</b></p> <p>Students attending this lecture obtain an overview on the impact, fundamental methods, and important applications of performance evaluation of communication networks. They are acquainted with characteristic mechanisms and scheduling algorithms used in quality of service networks and are able to explain their functionality in terms of network calculus and the framework of min-plus systems theory. In addition to basic queuing theory the students acquire sound knowledge of the theory of effective bandwidths and thus exhibit a theoretically founded understanding of statistical multiplexing. Beyond analytical methods, the students gain insight into simulation as well as selected measurement methods and tools used in real networks. They are able to define the scope of individual theories and methods, select suitable, problem tailored techniques, apply these to typical problems, and draw relevant conclusions.</p>				
<b>3</b>	<p><b>Recommended prerequisite for participation</b></p> <p>Basic courses of the first 4 semesters are required. Knowledge of lectures Communication Networks I and II are recommended.</p>				
<b>4</b>	<p><b>Form of examination</b></p> <p>Module final exam:</p> <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, duration: 30 min, standard grading system)</li> </ul>				
<b>5</b>	<p><b>Grading</b></p> <p>Module final exam:</p> <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Oral Examination, weighting: 100%)</li> </ul>

<b>Module name</b> Network Security					
<b>Module Nr.</b> 20-00-0512	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> English			<b>Module owner</b> Dr.-Ing. Michael Kreutzer		
<b>1</b>	<b>Content</b> <p>The integrated course Network Security covers the principles and practice of computer and telecommunication network security with particular emphasis on Internet security. After transferring the fundamentals of IT security and cryptography to the networking domain, we follow a top-down approach to network security. Starting with the application layer, the course provides a detailed discussion of network security principles and protocols. In addition to well known mechanisms, selected recent developments in the area of network security will be examined.</p> <p>Course contents:</p> <ul style="list-style-type: none"> <li>- Network security: introduction, motivation, and challenges</li> <li>- Fundamentals: a reference model for network security, security standards for networks and the Internet, security threats, attacks, services, and mechanisms</li> <li>- Cryptographic foundations for networking security: symmetric crypto and its use in networks, public-key crypto and its use in networks, support functions to implement network security</li> <li>- Application layer security</li> <li>- Transport layer security</li> <li>- Network layer security</li> <li>- Link layer security</li> <li>- Physical layer security and physical security</li> <li>- Operational network security: firewalls, intrusion detection systems</li> <li>- Selected topics in network security</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> <p>After successfully attending the course, students have acquired an in-deep knowledge in the domain of communication network security with emphasis on Internet security. Students are able to apply and transfer the most important fundamentals from IT security and cryptography to the field of communication networks. Students are able to distinguish the most important basic techniques for securing communication networks. They have a thorough understanding of security mechanisms on the different network layers (application layer, transport layer, network layer, link layer, physical layer). As a result, they are able to thoroughly discuss the characteristics and principles in the area of network security and exhibit detailed theoretical and practical knowledge in this field. Additionally, students are able to describe recent developments in the area of network security (e.g. peer-to-peer security, mobile network security, etc.). The exercise deepens the theoretical foundations by means of exercises, which consist of literature, calculation as well as practical implementation/application examples.</p>				
<b>3</b>	<b>Recommended prerequisite for participation</b> <p>Knowledge in the area IT Security, Introduction to Cryptography and Communication Networks</p>				
<b>4</b>	<b>Form of examination</b> <p>Module accompanying exam:</p> <ul style="list-style-type: none"> <li>• [20-00-0512-iv] (Technical examination, Written/Oral Examination, Standard BWS)</li> </ul>

<b>Module name</b> Project on Secure Mobile Networking					
<b>Module Nr.</b>	<b>Credit Points</b>	<b>Workload</b>	<b>Self study</b>	<b>Duration</b>	<b>Cycle offered</b>
20-00-0553	9 CP	270 h	180 h	1	Every 2. Sem.
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. rer. nat. Karsten Weihe		
<b>1</b>	<b>Content</b> The Project on Secure Mobile Networking covers the applied software development as well as hardware-software development. Topic areas covered are communication networks, IT security, mobile networks and wireless communications as well as the combination of these. Goal is to independently carry out a development project in a team. Course contents: - Independent solving of a development project in the area of communication networks, IT security, mobile networks and wireless communications - Project planning and project management - Survey on solution alternatives and discussion of pros and cons - Conception of a software architecture or a combined hardware-software architecture - Software/hardware design for the target platform - Prototypical realization on the target platform - Evaluation of the system with respect to performance aspects - Documentation of the implemented solution as well as extensive documentation of the project management				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After successfully attending the course, students have acquired the ability to solve complex problems in the area of secure mobile networking using software technology. To this end, the students are able to independently define, manage and carry out a project. The students have gained insight into the design/implementation of complex protocols or applications in one/multiple of the areas of communication networks, IT security, mobile networks and wireless communications. They are able to implement the chosen protocols and application, and to test the functionality as well as to evaluate the performance. The students are able to document the project planning and management, the developed software artefacts and to present the project progress and outcomes.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Successful participation of an lecture of SEEMOO.				
<b>4</b>	<b>Form of examination</b> Module accompanying exam: • [20-00-0553-pp] (Study achievements, Written/Oral Examination, Standard BWS)				
<b>5</b>	<b>Grading</b> Module accompanying exam: • [20-00-0553-pp] (Study achievements, Written/Oral Examination, weighting: 100 %)

<b>Module Nr.</b> 20-00-0366	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. Bernt Schiele		
<b>1</b>	<b>Content</b> Introduction to the topic of "Serious Games": scientific and technical foundations, application areas and trends. Individual lectures include: * Introduction to Serious Games * Game Development, Game Design * Game Technology, Tools and Engines * Personalization and Adaptation * Interactive Digital Storytelling * Authoring and Content Generation * Multiplayer Games * Game Interfaces and Sensor Technology * Effects, Affects and User Experience * Mobile Games * Serious Games Application Domains and Best Practice Examples The exercise consists of theoretical and practical parts. Students are taught how to use a Game Engine.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After successfully completing this course the students are able to explain the concept of "Serious Games" and can transfer it to different application domains (like education or health). They can describe the general approach for developing computer games and can apply basic principles of game design, personalisation / adaptation and interactive digital storytelling. Aside from that students are able to sketch out other current research questions regarding Serious Games as well as their solutions.

<b>Module Nr.</b> 18-sm-2280	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Ralf Steinmetz		
<b>1</b>	<b>Content</b> The course deals with topics in the area of software defined networking: <ul style="list-style-type: none"> <li>• SDN Data Plane</li> <li>• SDN Control Plane</li> <li>• SDN Application Plane</li> <li>• Network Function Virtualization</li> <li>• Network Virtualization and Slicing</li> <li>• QoS and QoE in Software Defined Networks</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will get a deep insight into Software Defined Networking as well as underlying technologies and applications.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Basic courses of the first 4 semesters are required. Knowledge of lectures Communication Networks I and II are recommended.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, BSc/MSc iST, MSc Wi-ETiT, CS, Wi-CS				
<b>7</b>	<b>References</b> Textbooks as indicated. Slides and paper copies as necessary.

<b>Module name</b> TK3: Ubiquitous / Mobile Computing					
<b>Module Nr.</b> 20-00-0120	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> German			<b>Module owner</b> Prof. Dr. rer. nat. Eberhard Max Mühlhäuser		
<b>1</b>	<b>Content</b> Objectives: - Knowledge of technical basics of the mobile communication - Knowledge of important challenges of the Ubiquitous Computing - Methodic knowledge about current approaches to these challenges Course Content: - Introduction to Ubiquitous Computing - Mobile Communication - Internet of Things: RFID and Smart Items - Service Discovery & Cloudlets - Context- and Location-aware Computing - Human Computer Interaction - Privacy and Trust in Ubiquitous Computing				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After successfully attending the course, students are familiar with the technical basis of mobile communication. They understand the fundamental challenge of ubiquitous computing. They know current approaches to solve these challenges. They are able to apply their knowledge to build ubiquitous computing systems.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Computer Netzwerke and Distributed Systems				
<b>4</b>	<b>Form of examination</b> Module accompanying exam: • [20-00-0120-iv] (Technical examination, Written/Oral Examination, Standard BWS)				
<b>5</b>	<b>Grading</b> Module accompanying exam: • [20-00-0120-iv] (Technical examination, Written/Oral Examination, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b> B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik May be used in other degree programs.

#### Courses

<b>Course Nr.</b> 20-00-0120-iv	<b>Course name</b> TK3: Ubiquitous / Mobile Computing		
<b>Instructor</b>		<b>Type</b> Integrated Course	<b>SWS</b> 4

<b>Module name</b> Ubiquitous computing in business processes					
<b>Module Nr.</b> 20-00-0121	<b>Credit Points</b> 3 CP	<b>Workload</b> 90 h	<b>Self study</b> 60 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. rer. nat. Eberhard Max Mühlhäuser		
<b>1</b>	<b>Content</b> - Learning how state-of-the-art ubiquitous computing technologies can be utilized in enterprise business processes and in the context of smart city services - Identifying technologies' economic potential for business processes and in the context of smart cities - Understanding underlying technologies, their benefits, challenges, and corresponding business cases - Technologies considered will be RFID technology and its integration with business processes, other smart items (e.g., smart shelves), etc. - Demonstration of how integration works between the real world and the virtual world as it is represented in enterprise software systems today - Hands-on experience and live demonstrations				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After participation in this course, students will have acquired knowledge about implications of ubiquitous computing on business to business processes and in the context of smart city services in conjunction with basic concepts.				
<b>3</b>	<b>Recommended prerequisite for participation</b>				
<b>4</b>	<b>Form of examination</b> Module accompanying exam: • [20-00-0121-vl] (Technical examination, Written/Oral Examination, Standard BWS)				
<b>5</b>	<b>Grading</b> Module accompanying exam: • [20-00-0121-vl] (Technical examination, Written/Oral Examination, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b> B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik M.Sc. Sportwissenschaft und Informatik May be used in other degree programs.

	<b>Course Nr.</b> 20-00-0121-vl	<b>Course name</b> Ubiquitous computing in business processes		
	<b>Instructor</b>		<b>Type</b> Lecture	<b>SWS</b> 2

<b>Module name</b> Machine Learning in Information and Communication Technology (ICT)					
<b>Module Nr.</b> 18-kp-2110	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> SoSe
<b>Language</b> English			<b>Module owner</b> Prof. Dr. techn. Heinz Köppl		
<b>1</b>	<b>Content</b> The module provides an introduction to the emerging field of machine learning from an engineering perspective. Important models and learning methods are presented and exemplified through problems from information and communication technology. <ul style="list-style-type: none"> <li>• Fundamentals of probability theory and multivariate statistics</li> <li>• Taxonomy of machine learning problems and models (supervised, unsupervised, generative, discriminative)</li> <li>• Regression and classification: theory, methods and ICT applications</li> <li>• Dimensionality reduction, clustering and big data analytics: methods and application in communications and signal processing</li> <li>• Probabilistic graphical models: categories, inference and parameter estimation</li> <li>• Fundamentals of Bayesian inference, Monte Carlo methods, Bayesian non-parametrics</li> <li>• Fundamentals of convex optimization: Solution methods and application in communications</li> <li>• Approximate algorithms for scalable Bayesian inference; application in signal processing and information theory (e.g. decoding of LDPC codes)</li> <li>• Hidden Markov models (HMM): Theory, Algorithms and ICT applications (e.g. Viterbi decoding of convolutional codes)</li> <li>• High-dimensional statistics (“large p small n” setting), learning dependency structure in high-dimensional data, learning causality relations from observational data.</li> <li>• Sparse estimation, random projections, compressive sensing: Theory and applications in signal processing</li> <li>• Deep neural networks (deep learning): Models, learning algorithms, libraries and ICT applications</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students are able to interpret and categorize specific engineering problems from the ICT domain in terms of machine learning problems. They are able to reduce such problems to standard machine learning problems and are able to determine suitable solution methods for them. They are able to implement all necessary algorithms from scratch, but they are also familiar with the state-of-the-art libraries in machine learning. They are able to determine the involved computational complexity of a method and choose an appropriate solution algorithms based on application constraints. They are able to apply the acquired methods to other domains, such as data analysis in biomedical engineering, analysis of social network data, etc.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Good command of Matlab (for instance knowledge from course 18-st-2030 Matlab Grundkurs) and engineering mathematics				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc etit, BSc/MSc iST, MSc iCE, MSc CE

### 3.5.2 Seminars

<b>Module name</b> Multimedia Communications Seminar II					
<b>Module Nr.</b> 18-sm-2090	<b>Credit Points</b> 4 CP	<b>Workload</b> 120 h	<b>Self study</b> 90 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Ralf Steinmetz		
<b>1</b>	<b>Content</b> This seminar deals with current and upcoming trends relevant to the future development of multimedia communication systems. The educational objective of this seminar is to gain knowledge about future research trends in different areas. To this aim, an extensive literature research will be performed, as well as the writing-up of a report and the presentation of selected, high-quality research topics from current leading magazines, newspapers and conferences in the web technologies research area. Some potential topics are: <ul style="list-style-type: none"> <li>• Knowledge &amp; Educational Technologies</li> <li>• Self organizing Systems &amp; Overlay Communication</li> <li>• Mobile Systems &amp; Sensor Networking</li> <li>• Service-oriented Computing</li> <li>• Multimedia Technologies &amp; Serious Games</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students shall acquire profound knowledge from current scientific publications, standards and literature on multimedia communication systems and applications which will build the future Internet. In so doing, the students will develop the following competencies: <ul style="list-style-type: none"> <li>• Search for and review relevant scientific literature.</li> <li>• Analyse and evaluate complex technical and scientific information.</li> <li>• Write technical and scientific abstracts and summary reports.</li> <li>• Present technical and scientific information.</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Solid knowledge in computer communication networks. Lectures in Communication Networks I and II are recommended.				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> CS, Wi-CS, ETiT, Wi-ETiT, MSc CS, MSc ETiT, MSc iST				
<b>7</b>	<b>References</b> Depending on specific topic (selected articles of journals, magazines, and conferences).				
<b>Courses</b>					
	<b>Course Nr.</b> 18-sm-2090-se	<b>Course name</b> Multimedia Communications Seminar II			
	<b>Instructor</b> Prof. Dr.-Ing. Ralf Steinmetz			<b>Type</b> Seminar	<b>SWS</b> 2

### 3.5.3 Laboratories

<b>Module name</b> Multimedia Communications Lab II					
<b>Module Nr.</b> 18-sm-2070	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 135 h	<b>Duration</b> 1	<b>Cycle offered</b> WiSe/SoSe
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr.-Ing. Ralf Steinmetz		
<b>1</b>	<b>Content</b> The course deals with cutting edge development topics in the area of multimedia communication systems. Besides a general overview it provides a deep insight into a special development topic. The topics are selected according to the specific working areas of the participating researchers and convey technical and basic scientific competences in one or more of the following topics: <ul style="list-style-type: none"> <li>• Network planning and traffic analysis</li> <li>• Performance evaluation of network applications</li> <li>• Discrete event simulation for network services</li> <li>• Protocols for mobile ad hoc networks / sensor networks</li> <li>• Infrastructure networks for mobile communication / mesh networks</li> <li>• Context-aware communication and services</li> <li>• Peer-to-peer systems and architectures</li> <li>• Content distribution and management systems for multimedia / e-learning</li> <li>• Multimedia authoring and re-authoring tools</li> <li>• Web service technologies and service-oriented architectures</li> <li>• Applications for distributed workflows</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> The ability to solve and evaluate problems in the area of design and development of future multimedia communication networks and applications shall be acquired. Acquired competences are: <ul style="list-style-type: none"> <li>• Design of complex communication applications and protocols</li> <li>• Implementing and testing of software components for distributed systems</li> <li>• Application of object-oriented analysis and design techniques</li> <li>• Acquisition of project management techniques for small development teams</li> <li>• Writing of software documentation and project reports</li> <li>• Presentation of project advances and outcomes</li> </ul>				
<b>3</b>	<b>Recommended prerequisite for participation</b> Keen interest to explore challenging topics which are cutting edge in technology and research. Further we expect: <ul style="list-style-type: none"> <li>• Solid experience in programming Java and/or C# (C/C++)</li> <li>• Solid knowledge in object oriented analysis and design</li> <li>• Solid knowledge in computer communication networks are recommended</li> <li>• Lectures in Communication Networks I (II, III, or IV) are an additional plus</li> </ul>				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Study achievements, Optional, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> MSc ETiT, MSc iCE, BSc/MSc iST, Wi-ETiT, BSc/MSc CS, Wi-CS,				
<b>7</b>	<b>References</b>				

Each topic is covered by a selection of papers and articles. In addition we recommend reading of selected chapters from following books:

- Andrew Tanenbaum: "Computer Networks". Prentice Hall PTR (ISBN 0130384887)
- Christian Ullenboom: "Java ist auch eine Insel: Programmieren mit der Java Standard Edition Version 5 / 6" (ISBN-13: 978-3898428385)
- Joshua Bloch: "Effective Java Programming Language Guide" (ISBN-13: 978-0201310054)
- Erich Gamma, Richard Helm, Ralph E. Johnson: "Design Patterns: Objects of Reusable Object Oriented Software" (ISBN 0-201-63361-2)
- Kent Beck: "Extreme Programming Explained - Embrace Changes" (ISBN-13: 978-0321278654)

**Courses**

<b>Course Nr.</b> 18-sm-2070-pr	<b>Course name</b> Multimedia Communications Lab II		
<b>Instructor</b>		<b>Type</b> Internship	<b>SWS</b> 3

<b>Module name</b> Lab Exercise on Secure Mobile Networking					
<b>Module Nr.</b> 20-00-0552	<b>Credit Points</b> 6 CP	<b>Workload</b> 180 h	<b>Self study</b> 120 h	<b>Duration</b> 1	<b>Cycle offered</b> Every 2. Sem.
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. rer. nat. Karsten Weihe		
<b>1</b>	<b>Content</b> The Lab Exercise on Secure Mobile Networking covers the applied software development as well as hardware-software development. Topic areas covered are communication networks, IT security, mobile networks and wireless communications as well as the combination of these. Goal is the solving of a given problem by implementation in software or hardware/software in a team. Course contents: - Solving of a problem in the area of communication networks, IT security, mobile networks and wireless communications - Survey on solution alternatives and discussion of pros and cons - Conception of a software architecture or a combined hardware-software architecture - Software/hardware design for the target platform - Prototypical realization on the target platform - Evaluation of the system with respect to performance aspects - Documentation of the implemented solution				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> After successfully attending the course, students have acquired the ability to solve problems in the area of secure mobile networking using software technology. The students have gained insight into the design/implementation of complex protocols or applications in one/multiple of the areas of communication networks, IT security, mobile networks and wireless communications. They are able to implement the chosen protocols and application, and to test the functionality as well as to evaluate the performance. Students are able to document the developed software artefacts and to present the project progress and outcomes.				
<b>3</b>	<b>Recommended prerequisite for participation</b> Successful participation in an lecture of SEEMOO.				
<b>4</b>	<b>Form of examination</b> Module accompanying exam: • [20-00-0552-pr] (Study achievements, Written/Oral Examination, Standard BWS)				
<b>5</b>	<b>Grading</b> Module accompanying exam: • [20-00-0552-pr] (Study achievements, Written/Oral Examination, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b> B.Sc. Informatik M.Sc. Informatik M.Sc. Wirtschaftsinformatik B.Sc. Psychologie in IT Joint B.A. Informatik B.Sc. Sportwissenschaft und Informatik Can be used in other degree programs.				
<b>7</b>	<b>References</b> Will be given in lab.				
<b>Courses</b>

### 4.1 Business Administration

<b>Module name</b> Bookkeeping					
<b>Module Nr.</b> 01-14-1030/2	<b>Credit Points</b> 2 CP	<b>Workload</b> 60 h	<b>Self study</b> 15 h	<b>Duration</b> 1	<b>Cycle offered</b> Every Sem.
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. rer. pol. Reiner Quick		
<b>1</b>	<b>Content</b> <ul style="list-style-type: none"> <li>• Fundamentals of accounting and bookkeeping</li> <li>• inventory</li> <li>• balance sheet</li> <li>• recording of assets and debt</li> <li>• recording of expenses and revenues</li> <li>• selected transactions (sales and purchases, noncurrent assets, current assets, accruals, wage and salary, distribution of earnings)</li> <li>• annual closing entry</li> </ul>				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> Students will understand basic concepts of financial accounting and its integration in accounting in general as well as the system of double-entry accounting. Students are going to learn to operate the recording of assets, debt, expenses and revenues. They will understand the procedure of double-entry accounting starting with the opening balance sheet, followed by the recording of transactions, the inventory and the final balance sheet. Selected issues of double-entry accounting will be discussed. Exercises are offered and discussed in the auditorium.				
<b>3</b>	<b>Recommended prerequisite for participation</b>				
<b>4</b>	<b>Form of examination</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written/Oral Examination, standard grading system)</li> </ul>				
<b>5</b>	<b>Grading</b> Module final exam: <ul style="list-style-type: none"> <li>• Module exam (Technical examination, Written/Oral Examination, weighting: 100%)</li> </ul>				
<b>6</b>	<b>Usability of this module</b> Recommended semester: 1

<b>Module name</b> Introduction to Business Administration					
<b>Module Nr.</b> 01-10-1028/f	<b>Credit Points</b> 3 CP	<b>Workload</b> 90 h	<b>Self study</b> 60 h	<b>Duration</b> 1	<b>Cycle offered</b> Every Sem.
<b>Language</b> German and English			<b>Module owner</b> Prof. Dr. rer. pol. Dirk Schiereck		
<b>1</b>	<b>Content</b> This course serves as an introduction into studies of business administration for students of other sciences. The course will provide a broad spectrum of knowledge from the “birth” of business administration as an university science field until its fragmentation into many specialized disciplines. Core topics will include basics of business administration (definitions and German legal forms), some Marketing concepts, introduction into Production Management (business process optimization and quality management), basic knowledge of organisational and personnel related topics, fundamental concepts of finance and investment as well as internal and external reporting standards.				
<b>2</b>	<b>Learning objectives / Learning Outcomes</b> The course encourages students who have not been confronted with business studies before to think economically. Furthermore, it should enable students to better understand actions of managers and corporations in general.				
<b>3</b>	<b>Recommended prerequisite for participation</b> None				
<b>4</b>	<b>Form of examination</b> Module final exam: • Module exam (Technical examination, Written/Oral Examination, standard grading system)				
<b>5</b>	<b>Grading</b> Module final exam: • Module exam (Technical examination, Written/Oral Examination, weighting: 100%)				
<b>6</b>	<b>Usability of this module</b>
